MD Portfolio Site v2

Minimum Requirements:

- Flash 8
- Text editor of your choice - Notepad or Text Edit work great - Don't use MS Word
- A server to deploy the site in
- The server must allow PHP 4 or higher for the contact form to work
- (optional) - Photoshop CS if you want to use the included PSD templates

So What's New?

- You can now add multiple portfolios by simply adding xml files! (You will need to make sure to update the file array in the main.as file)
- Portfolio images can now be enlarged when clicked on.
- Navigate the portfolio by using your arrow keys
- Added file-download script with easy to implement buttons
- More robust error checking and reporting

Included are:

- **_deploy**
    - **_js/**swfobject.js
    - **_php/**mail_script.php
    - **_portfolio**
    - **_swf/**main.swf
    - **_xml/**
        - port1.xml
        - port2.xml
        - port3.xml
        - port4.xml
        - port5.xml
    - index.html
- **_fla**
    - **_as**
        - contact_form.as
        - file_download.as
        - full_browser.as
        - main.as
        - portfolio_section.as
        - portfolio_subNav.as
        - site_main.as
    - **_classes/**
    - main.fla
- **_fonts**
    - FFF_Harmony - Free font from <u>Fonts For Flash</u>
    - Frucade Medium Extended - Free font from <u>Semplice Pixel Fonts</u>
    - Frucade Medium Regular - Free font from <u>Semplice Pixel Fonts</u>
- **_psd**
    - MD_PortfolioSite_ImageTemplate_v2.psd
    - MD_PortfolioSite_v2.psd
- MosesSupposes Fuse Engine: <u>www.mosessupposes.com/fuse</u>
- SWFObject: <u>blog.deconcept.com/swfobject</u>

How to deploy the site:

I have tried my best to make the site as easily customizable as possible without adding too much complexity. Here's step-by-step instructions on how to get the site up and running!

1. In a text editor of your choice, open **mail_script.php**. You can find this file at: _deploy/_php_ and change the email address to your

own.

2. In a text editor of your choice, open any of the XML files inside the XML folder **(i.e. port1.xml)** and edit at will. You can find these files at: *_deploy/_xml* and change all portfolio information, including file names, titles, urls, and descriptions.
    Note: I have changed the way I'm handling these XML files, so just add UP TO 20 items per file and the template will take care of the rest.

3. In Flash (or a text editor) open **main.as**. You can find this file at: *_fla/_as*. Change highlight color, border size, pdf download, and copyright notice to something of your choice.
    Further, if you're ready to deploy the site, **you MUST uncomment the _deploy paths and comment the _testing paths!**

4. (optional) - If you need to change the path to the class files (mosessupposes), open Publish settings, and click on Actionscript 2.0 to change your class path.

5. Save and publish your movie.

6. Upload **ALL FILES INSIDE THE _deploy FOLDER** to your site and test.

Customizing:

I have made every effort to make the site as easily customizable as I could. ALL Actionscript code has been centralized inside the _as folder for easy access to it, and all graphics and assets have been organized to help you find your way. I have also carefully commented all Actionscript code and named every important layer. I have thoroughly tested the site and everything is working in its current state, so any customization is done at your own risk! I will be more than happy to help out as best I can - within reason. I cannot help you customize things to fit your specific needs *beyond the scope of these files*.

It goes without saying that if you happen to find a bug in my files I will gladly help you crush it with merciless precision - but remember I can't always anticipate other people's coding practices, so please be patient. :)

So, having said all that...THANK YOU FOR YOUR PURCHASE!!! Good luck and hope you enjoy it!
